What is claimed is:

1. A method for transferring a communication fee, comprising the steps of:

 registering into a transmitting information storage device, information regarding destination users, a sender, and a particular packet data to be sent;

 when a terminal of said destination user registered in said transmitting information storage device performs a processing to receive packet data, charging said destination user for said packet data; and

 transferring fee charged to said destination users for said particular packet data, to said sender registered in said transmitting information storage device, by using a receiving status data for said particular packet data to be received by said terminals of said destination users registered in said transmitting information storage device.

2. The method set forth in claim 1, further comprising a step of:

 charging said sender for said particular packet data when said particular packet data is transmitted to the destination users registered in said transmitting information storage device.

3. The method set forth in claim 1, wherein said registering step comprises the step of:

 registering information regarding said sender and said particular packet data to be sent into said transmitting information storage device; and

 registering information regarding said destination users into said transmitting information storage device.

4. The method set forth in claim 3, wherein said step of registering information regarding said destination users includes a step of registering information regarding said destination users that is acquired in response to an access by said terminals of said destination users.

5. The method set forth in claim 1, wherein said transferring step comprises the steps of:

  performing a processing to exempt particular destination users whose terminals are confirmed to have performed said processing to receive said particular packet data among said destination users registered in said transmitting information storage device from the charge for said particular packet data; and

  performing a processing to charge said sender registered in said transmitting information storage device for a fee of said particular packet data for said particular destination users whose terminals are confirmed to have performed said processing to receive said particular packet data among said destination users registered in said transmitting information storage device.

6. The method set forth in claim 3, wherein said transferring step further comprises the steps of:

  acquiring data regarding said particular packet data which does not reach; and

  specifying destination users who is confirmed to have performed said processing to receive said particular packet based on said data regarding said packet which does not reach.

7. A program stored on a storage medium for causing a computer to transfer a communication fee, said program comprising the steps of:

  registering into a transmitting information storage device, information regarding destination users, a sender, and a particular packet data to be sent;

  when a terminal of said destination user registered in said transmitting information storage device performs a processing to receive packet data, charging said destination user for said packet data; and

  transferring fee charged to said destination users for said particular packet data, to said sender registered in said transmitting information

17

storage device, by using a receiving status data for said particular packet data to be received by said terminals of said destination users registered in said transmitting information storage device.

8. The program set forth in claim 7, further comprising a step of:
  charging said sender for said particular packet data when said particular packet data is transmitted to the destination users registered in said transmitting information storage device.

9. The program set forth in claim 7, wherein said registering step comprises the step of:
  registering information regarding said sender and said particular packet data to be sent into said transmitting information storage device; and
  registering information regarding said destination users into said transmitting information storage device.

10. The program set forth in claim 9, wherein said step of registering information regarding said destination users includes a step of registering information regarding destination users that is acquired in response to an access by said terminals of said destination users.

11. The program set forth in claim 7, wherein said transferring step comprises the steps of:
  performing a processing to exempt particular destination users whose terminals are confirmed to have performed said processing to receive said particular packet data among said destination users registered in said transmitting information storage device from the charge for said particular packet data; and
  performing a processing to charge said sender registered in said transmitting information storage device for a fee of said particular packet data for said particular destination users whose terminals are confirmed to have performed said processing to receive said particular packet data

18

among said destination users registered in said transmitting information storage device.

12. The program set forth in claim 9, wherein said transferring step further comprises the steps of:

 acquiring data regarding said particular packet data which does not reach; and

 specifying destination users who is confirmed to have performed said processing to receive said particular packet based on said data regarding said packet which does not reach.

13. A system for transferring a communication fee, comprising:

 means for registering into a transmitting information storage device, information regarding destination users, a sender, and a particular packet data to be sent;

  means for charging said destination user for said packet data when a terminal of said destination user registered in said transmitting information storage device performs a processing to receive packet data; and

 means for transferring fee charged to said destination users for said particular packet data, to said sender registered in said transmitting information storage device, by using a receiving status data for said particular packet data to be received by said terminals of said destination users registered in said transmitting information storage device.

14. The system set forth in claim 13, further comprising:

 means for charging said sender for said particular packet data when said particular packet data is transmitted to the destination users registered in said transmitting information storage device.

15. The system set forth in claim 13, wherein said means for registering comprises:

19

first means for registering information regarding said sender and said particular packet data to be sent into said transmitting information storage device; and

first means for registering information regarding said destination users into said transmitting information storage device.

16. The system set forth in claim 15, wherein said second means for registering includes means for registering information regarding said destination users that is acquired in response to an access by said terminals of said destination users.

17. The system set forth in claim 13, wherein said means for transferring comprises:

means for performing a processing to exempt particular destination users whose terminals are confirmed to have performed said processing to receive said particular packet data among said destination users registered in said transmitting information storage device from the charge for said particular packet data; and

means for performing a processing to charge said sender registered in said transmitting information storage device for a fee of said particular packet data for said particular destination users whose terminals are confirmed to have performed said processing to receive said particular packet data among said destination users registered in said transmitting information storage device.

18. The system set forth in claim 15, wherein said means for transferring further comprises:

means for acquiring data regarding said particular packet data which does not reach; and

means for specifying destination users who is confirmed to have performed said processing to receive said particular packet based on said data regarding said packet which does not reach.
